

Be in Control of your Grazing Business

with Cell GrazingFocus

Ever changing climatic circumstances mean that now, more than ever, you need skills and understanding of sustainable grazing systems.

The Cell GrazingFocus course will give you greater understanding of base ecological processes that drive the grazing system and how these interact with animal performance and profit. The end result being

improved health and productivity of soils, pasture and livestock and improved business profitability.

The greatest advantage of completing the Cell GrazingFocus course is the increased control you will have over your grazing business and the increased confidence in your own ability to achieve the results you want.

KOJONUP 16 - 19 August 2010
